

Gillware Online Backup - Standard

Data Backup: Are external hard drive backups really the best option?

If you or someone you know has experienced a hard drive failure, you may find yourself reevaluating your strategy for backing up your files. But after hearing about a hard drive crash, you're probably hesitant to use external hard drives as your only point of backup.

Physical backups are not the best option for your data backups:

- External hard drives are prone to failure
- Theft can leave you without any backup at all
- Fires and floods threaten your physical backups as well
- Natural disasters like hurricanes and tornadoes can destroy machines

There is a better choice — Gillware Online Backup - Standard

Gillware Online Backup - Standard is a reliable backup solution that offers a cloud-based alternative to external hard drive backups. With Gillware Online Backup - Standard, you can be sure that your data is being backed up securely and remotely to eliminate the risks associated with on-site backups.

We know your data is important to you: from hours of work on documents to years of memories in photos. You don't want to risk losing your files to a hard drive crash. Luckily, Gillware Online Backup - Standard is a fully cloud-based backup solution:

- The solution is automated: mark your files for backup according to priority and they will automatically backup
- Unlike other backup services, Gillware Online Backup - Standard allows you to backup files from multiple computers
- Security is guaranteed. Data is encrypted during transfer and securely stored in our SOC type 2 and 3 audited data center owned and operated by Latisys

Pricing for Gillware Online Backup - Standard

- \$99 for 100GB for two years
- \$1 per each additional GB

Choose Gillware Online Backup - Standard backup solution for your cloud backup needs!
